

Daniel Enyia

Backend Developer (in training)

Abia State, Nigeria | habittracker045@gmail.com | github.com/habittracker045-art |
habittracker045-art.github.io/DANIEL-ENYIA-PORTFOLIO

SUMMARY

Software Engineering student focused on backend development. Comfortable building REST APIs, authentication flows, and database-backed applications with Node.js, Express, and MongoDB. Has shipped a live full-stack application handling real user accounts and payments, and is currently building a second product from the ground up. Learning fast and building in public.

EDUCATION

Federal University of Technology, Minna (FUTMinna)

B.Eng. Software Engineering — In Progress

PROJECTS

The Christian Youth — Live

Node.js · Express · MongoDB · REST API · Auth & Sessions · Subscriptions

- Built a full-stack habit-tracking and faith companion app with scripture reading, streaks, and journaling
- Implemented user authentication, session handling, and paid subscription tiers with real payment flows
- Integrated an AI coach feature to support daily user engagement

The Author's Bookshelf — In Progress

HTML/CSS/JS · REST API · Paystack · Admin Dashboard

- Building an ebook storefront for independent authors with cart, checkout, and Paystack payment integration
- Designing download-link verification, lead capture, and a full admin panel for managing books, orders, and leads with CSV export

SKILLS

Languages & Runtimes: JavaScript, Node.js

Backend: Express.js, REST API design, Authentication & Sessions, Payment integration (Paystack)

Database: MongoDB

Tools: Git, GitHub, Render (deployment)

Currently learning: System design, automated testing, deployment pipelines
